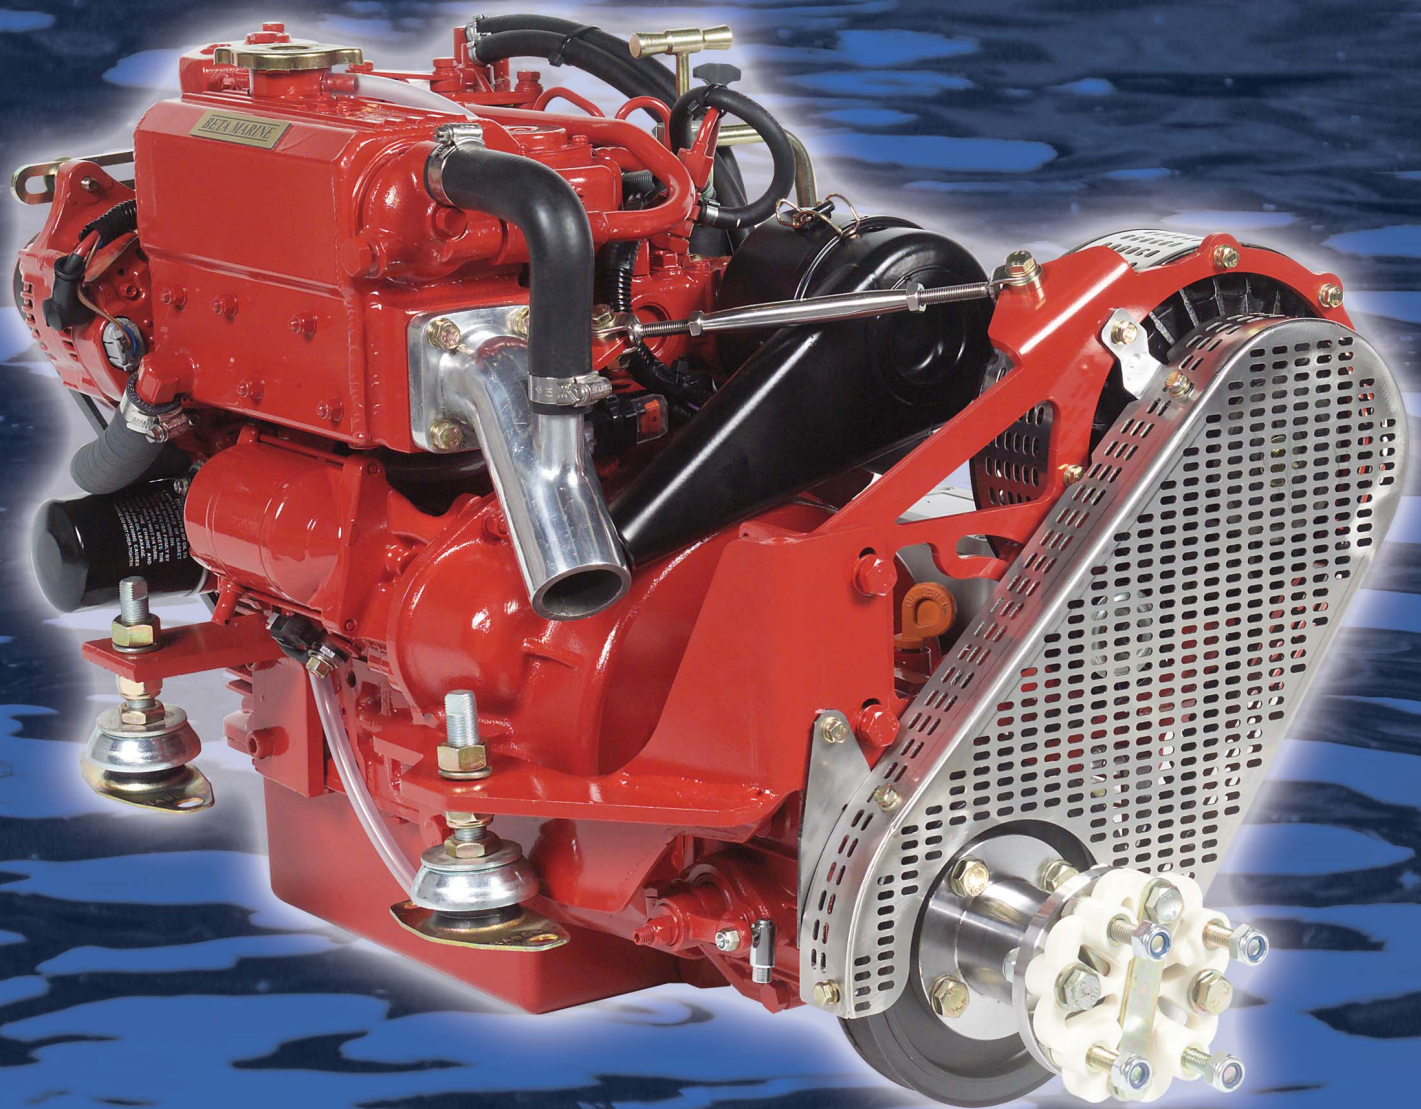
BETA MARINE

Hybrid Propulsion

Heat Exchanger Cooled 25 hp



All the Power You Need

Hybrid Propulsion

The Beta Hybrid solution is available in co-operation with Hybrid-Marine Limited.

The Beta Hybrid Propulsion system comprises our reliable Beta 25 heat exchanger marine propulsion engines mounted with a proven 10kW electric motor / generator that is controlled by a push button controller.

You can choose to cruise conventionally on the Beta diesel engine; or with the 10kW electric motor powered by your batteries. Cruising with silence and the electric motor becomes a truly enjoyable experience.

- An ***abundance of electrical power*** available (from your battery bank) that can power a washing machine, or microwave or kettle; television and DVD's no problem – without running the engine.
- The electric motor provides you with a ***environmentally friendly green*** solution. In crowded marinas you can make a silent departure, no-one will hear you leaving at 6.00 am.
- The 10kW electric motor driven by the engine becomes a ***5kW*** battery charging generating set.
- When sailing the '*trailing propeller*' will recharge your batteries.
